Soap and Pepper experiment

This experiment is to show you that using soap, really does help to keep us safe from germs!

1. Put some water into a bowl.

2. Sprinkle some pepper on top of the water.

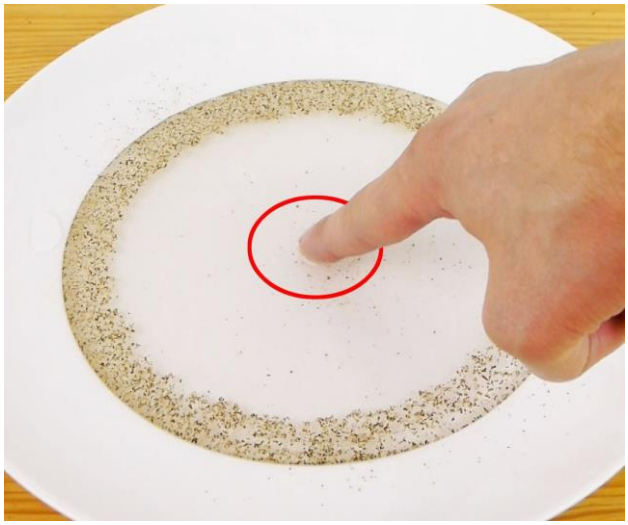
3. Put your finger into the water and then take it out.

4. Observe what has happened (your finger should be covered in pepper)

5. Put soap on your finger.

6. Put your finger (with soap on back into the water)

7. Observe what happens (the pepper should move away)

See! Soap is helping to keep us all safe!


Enjoy
